STYLAGE[®]
EO THE TREATMENT

THE INJECTABLE FILLER

Stylage[®] is the very first Hyaluronic Acid filler cross linked with Mannitol, a potent antioxidant found in fruit and vegetables, that produces a perfectly natural smoothing, hydrating and plumping effect on the skin and can be used to correct lines and wrinkles.

When a Hyaluronic Acid filler is injected, there is naturally some inflammation in the skin, which can cause skin ageing and also make the filler break down more rapidly. Mannitol is a powerful antioxidant that reduces inflammation in the vicinity of the injection, so there is less swelling and longer lasting results.

Stylage[®] boasts a 12 – 18 month longevity. It can be used to fill and smooth wrinkles, for natural lip correction, volume restoration, hydration, chin remodelling, tear trough correction, neck, décolleté & hand rejuvenation.

Dr Elisabeth Dancey (Bijoux Medi Spa) has been using Stylage[®] for the last 18 months, having been introduced by a French colleague, Dr Aida Cheriet. "My clients are too busy to have swelling for any more than a few hours, especially in the lips or eye area. This is why I prefer Stylage[®] to other HA fillers. We can safely say that all HA fillers are perfect tools for the job, but Stylage[®] has the added benefit of shortened recovery time and increased duration of results."
