## ▶ MAG introduces Stylage® HydroMAX Treatment

Medical Aesthetic Group has introduced a new treatment for skin hydration to the UK. Developed by Laboratories VIVACY®, Stylage® HydroMAX is the first mesotherapy treatment to cross link hyaluronic acid filler with sorbitol. Sorbitol is a potent antioxidant naturally found in fruits and vegetables, which reduces the negative effects of free radicals and optimises the longevity of the treatment. It restores proper levels of skin hydration and improves elasticity and firmness to produce a perfectly natural smoothing effect on lines and wrinkles.

Due to its long-lasting anti-oxidative hydration, skin that has been compromised by age, stress, poor diet, smoking, sun exposure, frost, wind and hormonal imbalances can now drink in the benefits of this painless procedure and appear healthy and glowing again. During a treatment, Stylage® HydroMAX is delivered into the skin via series of multiple, micro fine injections otherwise known as mesotherapy or skin needling. Hyaluronic gel creates an intense smoothing, hydrating and plumping effect and antioxidant sorbitol immediately reduces the negative effects of free radical damage. Also any risk of bruising and swelling is greatly decreased and the sorbitol protects the product from degrading creating a longer lasting effect.

For best results a course of four treatments in one-week intervals is recommended.
