## Get that *Je ne sais quoi* with Stylage®

Smart, timeless, sophisticated yet feminine, the French have a certain way with style. Less is definitely more when it comes to Parisian dressing. And now VIVACY Laboratories have created a new Crème de la crème of dermal fillers:

**STYLAGE**  
IPN LIKE TECHNOLOGY

**Stylage®** is the very first Hyaluronic Acid filler cross linked with Mannitol, a potent antioxidant, resulting in one of the longest lasting fillers on the market that produces a perfectly natural smoothing effect on lines and wrinkles.

Mannitol is an antioxidant found naturally in fruits and vegetables reducing the negative effects of free radicals and consequently the risk of bruises and swelling during the procedure, optimizing your results.

During an intradermal injection, the invasive movement of the needle through the skin's layers provokes an inflammatory response. Free radicals are then produced that damage cells which puts stress on your skin. During injections, hyaluronic acid is the first molecule to be attacked by free radicals. Consequently, the filler injected depletes quickly and lasts less time than usually expected.

The addition of antioxidant Mannitol within Stylage® slows the effects of these free radicals which mean the product is not broken down in the hours following the injection. This reduced trauma of the skin means the smoothing effect is immediate and has a long-lasting effect. Unlike other fillers standard 3-6 month maintained results, Stylage® lasts 6 -12 months and provides instant long lasting natural outcome.

The added antioxidant Mannitol in Stylage® has many benefits:

- Fewer returns for top-up injections
- Fights free radicals
- Natural Smoothing effect
- Softer more translucent skin
- Reduces intradermal skin trauma
- Long lasting effect 6-12 months
- People with poor lifestyles (drinkers/smokers) who produce a large amount of free radicals and have been told they are uncorrectable can now be successfully treated with Stylage® because of its long-lasting antioxidative hydration
- There is an option to have built-in local anaesthetic for no more pain during the procedure

The advanced IPN-Like technology, combining cross-linked hyaluronic acid and the natural antioxidant Mannitol, made it possible for VIVACY to develop a product that is characterized by extraordinary elasticity and results in a very natural effect. For more information please contact:
